NEW: Western Timber Frame

Western Timber Frame sought out Wagner and Company when they stumbled across their unique website and found custom pergolas. Being impressed and confident with Wagner and Company's ability, a phone call was made and the rest fell into place.

Wagner researched the structures thoroughly, noting a design and dovetail system unlike any other. The structure doesn't have bulky metal brackets or cuts that may crack due to weather. Each Timber Frame structure is custom made to order, no cheap kit from a big box store.

Wagner and Co. is proud to offer this new quality product for the up and coming season.

FEATURED PROJECT:

When new owners of a property called Wagner and Company they were looking for someone to help renovate an existing fireplace. Upon realizing the old structure was unsuitable for restoration and poorly designed, a new outdoor entertainment area took shape. Moving the fireplace closer to the house allowed for easier access and usability. A covered wood box keeps firewood close and dry.

A commercial grill and bar top making grilling and serving guests a breeze. Soft lighting illuminates the hand selected river rock veneer. A tumbled paver patio gives the area a durable and colorful surface. Native planting blends the area into its surroundings. Blue grass encompasses the back yard, inviting visitors and kids to enjoy the entire backyard.
